+972597645012

Gaza

I am a fresh graduate of software development looking to have a new opportunity in the software testing field, where I can increase my skills and gain knowledge in my study field as well as add value to my place of work.

Education

Bachelor's Software Development at Islamic University of Gaza, Gaza

August 2020 - May 2025

Internships

SOFTWARE AUTOMATION TESTER (internship) at Gaza Electricity Distribution Corporation Company, Gaza

June 2023 - October 2023

- I built a testing framework according to global standards in the field of software quality testing, using Selenium.

Software Quality Assurance Tester (internship) at [Sitech](#), Amman, Jordan

August 2025 - November 2025

- I built a testing framework according to global standards in the field of software quality testing, using Selenium.

Skills

Programming Languages: C++, Java, CSS, HTML, Vanilla JS, MySQL

Test Automation Frameworks: Cypress, Cucumber, Selenium, Playwright, Appium, TestNG

API Testing: Postman, Rest Assured, Swagger UI

Bug Report: Allure Report, Newman, Excel

Software Development Methodologies: Agile, Scrum, Kanban

Tools: GitHub, Visual Studio Code, Eclipse, NetBeans, IntelliJ IDE, Jira, Slack, Outlook, Postman, GitLab

Other: Understanding SDLC process, JMeter performance testing, database testing, CI/CD

Projects

Graduation Project (Store-app) • [GitHub](#)

API Testing

Todo App Project • [GitHub](#)

e2e testing using Selenium & API Testing (Rest Assured and Postman)

Final Project Sitech (internship) • [GitHub](#)

International Project "Techno Talk" • [Link](#)

The project was developed in collaboration with the Office of the High Commissioner for Human Rights, the European Union, UN Women Palestine, and Flow Accelerator. The project involved the design of an AI-powered mobile application and an Arabic-speaking smart glove to support women with hearing disabilities in Gaza.

Languages

Arabic - Native

English - Conversational

Certificates

Software Quality Assurance Engineering (Manual & Automation) from Princess Sumaya University for Technology

November 2024 • [↗](#)

certificate postman automation project from QaCart

September 2025 • [↗](#)

certificate selenium project from QaCart

September 2024 • [↗](#)

Internship Program (Quality Assurance Track) – 2025 at Sitech. from Sitech

November 2025 • [↗](#)

Programming Foundations – Level 1 from programming advices

December 2025 • [↗](#)

Certificate in Programming Foundations – Level 1, verifying the ability to :

1- Understand how computers represent and process data 2- Reason about binary, hexadecimal, and octal systems confidently 3- Explain core computer concepts and components 4- Understand programming language levels and translation processes 5- Apply correct thinking when working with variables and operations 6- Build a strong conceptual foundation for any programming language

Algorithms & Problem-Solving Level 1 from programming advices

December 2025 • [↗](#)

Certificate in Algorithms and Problem Solving – Level 1, verifying the ability to:

1- Understand and explain what algorithms are 2- Analyze problems logically without relying on code 3- Design step-by-step solutions using flowcharts 4- Break down problems into structured logical steps 5- Apply algorithmic thinking independent of any language 6- Build a strong foundation for coding-based problem solving

Introduction to Programming with C++ – Level 1 from programming advices

December 2025 • [↗](#)

Certificate in Introduction to Programming with C++ – Level 1, verifying the ability to:

1- Write correct and meaningful C++ programs 2- Apply problem-solving thinking using code 3- Use core programming constructs confidently 4- Build structured and reusable logic 5- Understand C++ as a programming tool, not just a language 6- Prepare for advanced C++ and algorithmic problem solving

This certification confirms real programming readiness, not just syntax familiarity.

Algorithms & Problem-Solving – Level 1 (Solutions) from programming advices

March 2026 • [↗](#)

Certificate in Algorithms & Problem-Solving – Level 1 (Clean Code Solutions), verifying the ability to:

1- Apply Divide and Conquer in real programming problems 2- Design clean, modular, and reusable solutions 3- Break large problems into manageable components 4- Reduce redundancy and improve maintainability 5- Control code structure as systems grow 6- Write professional-grade problem-solving code

This certification confirms clean-code readiness, not just problem-solving ability.
